# TREE PLANTERS' NOTES

A Publication for Nurserymen and Planters  
of Forests and Shelterbelts

## CONTENTS:

- ANNUAL PLANTING REPORT - 1955
- FOREST TREE NURSERIES IN THE U. S. - 1955

U. S. DEPARTMENT OF AGRICULTURE  
FOREST SERVICE  
WASHINGTON 25, D. C.

## TREE PLANTERS' NOTES NO. 23

This issue of Tree Planters' Notes gives the record of the Nation's forest and windbarrier planting work in fiscal year 1955 and a copy of a list or directory of the year's forest tree nurseries. These are enclosed in this jacket, separately bound so that they may be put with the similar reports of previous years if you care to do so. They are titled:

Forest and Windbarrier Planting in the United States During 1955

The situation in general  
Statistics by states and agencies doing planting  
Quantities of stock produced

Forest Tree Nurseries in the United States — 1955

Location and ownership  
Name of resident nurseryman  
Production in fiscal year 1955

The sources and limitations of the data are set forth in the two reports themselves. We urge that any errors, omissions, or suggestions for improvement in the data be called to our attention.

# FOREST AND WINDBARRIER PLANTING IN THE UNITED STATES

during

**1955**

(July 1, 1954 - June 30, 1955)

The situation in general  
Statistics by states and agencies doing planting  
Quantities of stock produced

(Compiled from information furnished by the State Foresters or other appropriate public officials of each State and Federal agency concerned)

FOREST AND WINDBARRIER PLANTINGS IN THE UNITED STATES  
DURING 1955

Definition of terms, and foreword.

In this report the words "forest planting" or "reforestation" include a) plantings on poorly stocked or denuded forest land, b) plantings of woodlots on abandoned farm lands, and c) plantings made to speed the regeneration of newly cutover forests even though natural regeneration was to be expected. These words do not include "windbarrier plantings," which are plantings of shelterbelts around fields, and windbreaks around farmstead buildings. Windbarrier plantings are tremendously important to the farmers who make them, but their primary product is wind protection, and aside from some posts and fuelwood, they will probably add little to the Nation's eventual supply of timber. Their inclusion with "forest" plantings can give a misleading idea of "reforestation" accomplishments. Therefore, this 1955 report shows "forest plantings" and "windbarrier plantings" in separate tables. This must be carried in mind if this 1955 report is to be contrasted to one for some previous year. "Planting" or "tree planting" are the general terms used to include both types together.

Acres planted, 1955 and previously

Tree planting during the fiscal year 1955 (July 1, 1954 to June 30, 1955) as reported by the State Foresters and other agencies, was as follows:

Forest plantings	780,839 acres
Windbarrier plantings	31,749 acres

Total plantings for all reasons by all owners 812,588 acres

The comparable gross figures for recent years are:

1955	812,588 acres
1954	811,066 "
1953	715,548 "
1952	522,935 "
1951	456,368 "
1950	497,507 "
1940	519,051 "
1930	138,970 "

The gross figure for 1955 is only 1/5 of one percent greater than that of 1954. The spectacular rate of increase experienced each year since 1947 has ceased, at least for this one year. It will be unfortunate if this present rate of about 800,000 acres should prove to be the usual amount from here on, for it is far short of being adequate to meet the size of the problem that exists.

Accomplishments in 1955 by ownership classes

Both classes of planting

The Federal Government planted 77,002 acres of forest and 3,420 acres of windbarriers in 1955 upon lands administered by its various agencies. This is approximately 7,400 acres greater than what it did in 1954.

The States and other non-Federal public agencies planted 51,332 acres of forest and 182 acres of windbarriers— approximately the same as in 1954.

Private landowners planted 652,505 acres of forest and 28,147 acres of windbarriers— a total of 680,652 acres. This is about 1% less than they planted in 1954.

In eleven states the private land planting increased 52,700 acres from 1954.

In twenty-four states the private land planting was approximately the same as in 1954.

In fifteen states the private land planting decreased 58,672 acres from 1954.

Forest planting

States in which the private landowners are reforesting more than 20,000 acres annually are:

Georgia	96,000 acres	Alabama	36,729 acres
Florida	91,000 "	South Carolina	33,000 "
Pennsylvania	59,000 "	New York	32,000 "
Mississippi	52,000 "	Texas	22,400 "
Louisiana	45,000 "	North Carolina	22,007 "
Michigan	37,100 "	Wisconsin	21,000 "

The reforestation work of industrial organizations amounts to 45% of the total being done on private lands. Forest Industries planted 239,000 acres of their land, which is about 27,000 acres less than what they planted in

1954; and Other Industries planted 52,600 acres, which is 8,300 acres more than they planted in 1954. It is probable that this decrease by the forest industries would actually have been an increase had plenty of planting stock been available. States in which the forest industries, and other industries are especially active in reforesting their lands are:

Florida	63,000 acres	Mississippi	14,000 acres
Georgia	48,200 "	North Carolina	13,000 "
Pennsylvania	32,100 "	Texas	10,700 "
Louisiana	27,300 "	Arkansas	9,800 "
Alabama	18,500 "	Virginia	8,700 "
South Carolina	16,000 "		

#### Windbarrier planting

Although the annual reports for previous years did not separate the windbarrier plantings from the forest plantings, we know that in certain states most of the private planting that is done is for windbarrier purposes. The following tabulation therefore shows the amount of such planting done in the leading windbarrier states in 1955 and in 1950.

	<u>1955</u>	<u>1950</u>
North Dakota	7,636 acres	870 acres
South Dakota	6,897 "	6,767 "
Nebraska	6,600 "	5,771 "
Colorado	996 "	1,471 "
Indiana	928 "	Not known
Kansas	905 "	1,021 acres

The program for this type of planting is nearly static except in North Dakota where it is being pushed vigorously with stock from two large State and two large Soil Conservation District nurseries.

#### The job to be done

The following tables gives an estimate of the tree planting job in the continental United States at the start of fiscal year 1953. This estimate was made by the State Foresters and other agencies as a part of the study recently made of the Nation's timber resource. (Timber Resource Review, Chapter IV - C, Tree Planting; and Chapter IX, Tables 18 and 19.)

The acreages it gives do not include significant amounts of the farm land which should be diverted from surplus farm crop production and planted to trees. Any such diverted acreages, therefore, are additional to the acreages given on the next page.

**The Tree Planting Job in Continental United States  
at the Beginning of Fiscal Year 1953**

	Commercial Forest Land	Non-Commercial Forest Land	Windbarrier Lands	Total
<b>Thousands of Acres</b>				
New England States	1,228	18	0	1,246
Middle Atlantic States	3,725	2	0	3,727
Lake States	7,651	636	200	8,487
Central States	7,869	402	124	8,395
Plains States	975	448	2,337	3,760
<b>Total North</b>	<b>21,448</b>	<b>1,506</b>	<b>2,661</b>	<b>25,615</b>
S. Atlantic States	4,081	0	0	4,081
Southeastern States	14,211	0	0	14,214
West Gulf States	3,652	0	0	3,652
<b>Total South</b>	<b>21,947</b>	<b>0</b>	<b>0</b>	<b>21,947</b>
Pacific Northwest States	2,468	354	10	2,832
California	4,104	3,107	0	7,211
N. Rocky Mountain States	1,169	105	190	1,464
S. Rocky Mountain States	812	375	83	1,270
<b>Total West</b>	<b>8,553</b>	<b>3,941</b>	<b>283</b>	<b>12,777</b>
<b>TOTAL CONTINENTAL U.S.</b>	<b>51,948</b>	<b>5,417</b>	<b>2,944</b>	<b>60,339</b>

These are the figures with which the annual accomplishments shown in this Report must be contrasted. Furthermore, not every acre so reported can be considered as a reduction of the acres shown in the table, since obviously not all plantations survive satisfactorily, and some of the current planting is not reducing the backlog shown above but is, instead, being done on newly cut over acres that would have restocked naturally had their owners been willing to wait awhile. In other words when the accomplishments of any one year are considered in the light of the above facts it is seen that our present progress is indeed slow.

**Seed supplies**

Ever since planting stock production began to expand the nurseries have been hampered by lack of seed. In fact, a supply of suitable seed has always been and continues to be the biggest single problem confronting a tree planting program. The states with the larger nurseries have tried to meet their problem by building new extractories and refrigerated seed storage vaults and have organized vigorous programs of collecting and stock-

piling seed. For example, record quantities of seed were gathered in the South and in the Pacific Northwest during the Fall of 1955. Yet, in general, the tree seed in storage for the future is barely adequate for the current programs in many of the states and is actually inadequate in places.

The problem of obtaining seed is complicated by the fact that many species produce collectable quantities of seed only at irregular and infrequent intervals. In some cases as long as seven or more years may elapse between crops. Furthermore, apparently promising crops are subject to destruction from various insects, blights, and weather conditions so that they fail to develop at all or contain infertile seed. For example, much tree seed in the southern portions of the Central and the Prairie states was destroyed in the March 1955 freeze, and the Pacific Northwest now reports a possible loss of the 1956 Douglas fir seed crop as a result of the mid-November 1955 freeze.

Nurseries - numbers, operators, and 1955 production

A summary of the forest tree nurseries operating in 1955 follows:

Agency or Owner	Active Nurseries	Actual or Estimated Output of Trees
U. S. Forest Service	12	88,088 M
Tennessee Valley Authority	1	22,242
State Foresters or similar	90	519,462
Cities and Counties	3	233
Soil Conservation Districts	6	8,732
Paper industries	12	39,240
Lumber industries	3	7,276
Private commercial	40	57,000
<b>TOTAL</b>	<b>167</b>	<b>742,273 M</b>

(For additional details see Table 6 of this Report, and "List of Forest Tree Nurseries in the U.S. During 1955")

The only Federal nurseries in operation are the twelve of the U. S. Forest Service and the one of the Tennessee Valley Authority. The Forest Service nursery trees go into a variety of programs—as onto National Forests, lands of the Atomic Energy Commission, flood control projects, and private lands through the cooperative tree distribution programs (C-M 4 program) of various states. The trees from the TVA go mostly onto private lands through the established programs of that Agency.

Most of the production from the state nurseries goes onto privately owned lands, largely through the C-M 4 program. The state nursery in Colorado and two in Pennsylvania ceased tree planting stock production in 1955. The production at the Colorado nursery was quite small and the loss of two in Pennsylvania was counterbalanced by increased production at one of its others. Although the 1955 production at the southern state nurseries was seriously curtailed by a seed shortage the total production of the 90 state nurseries increased by 17-1/4 million plants over 1954. A new record for the state nurseries of 519-1/2 million plants was achieved. Florida and North Carolina each is bringing a new 25 million tree nursery into production in 1956 and another of similar size is proposed in South Carolina during the next year or so. Texas has started a nursery at Big Spring to produce windbarrier planting stock.

Most of the production from Forest Industry nurseries goes onto Company lands, but some of it is distributed through a variety of Company programs to private landowners—usually free-of-charge--for planting on their own lands. The nurseries of these companies in the South also suffered curtailed production in 1955 because of a lack of seed, but collections during the Fall should relieve this somewhat. Two new Company nurseries should come into production in 1956 in Georgia and another is planned in Texas; their combined output will be somewhere between 15 and 25 million trees.

A new Soil Conservation District Nursery .started production in Michigan with an initial output of 832 M, and production at some of the other S.C. District nurseries increased so that the total from this class increased from 5.6 million in 1954 to 8.7 million in 1955. Four additional commercial nurseries reported that they now produce forest or windbarrier planting stock and an increase of 2 million plants is estimated in the year's production by this class.

#### Supply and Demand for Planting Stock in 1955

Planting stock orders refused by some of the southern State Foresters because of a shortage of nursery stock probably totalled more than 50 million trees and would have been even greater had not one state had a considerable surplus. Shortages in stock were also reported from the Pacific Northwest, some of the Lake States, and in lessening amounts from many of the others. The usual transfer of relatively small quantities of various species occurred between a number of the states.

In general, the situation might be summed up by saying that the present total production is considerably less than the present total demand.

ROLAND ROTTY, In Charge  
Tree Planting Cooperation

FOREST SERVICE  
WASHINGTON 25, D. C.

FOREST TREE NURSERIES IN THE UNITED STATES IN 1955 <sup>1</sup>

<u>Operators</u>	<u>Nurseries</u>	<u>1955 Production (M's)</u>
Federal		
Forest Service	12	88,088
Tennessee Valley Authority	1 <sup>2</sup>	22,242
Total "Federal"	13	110,330 M
State		
State Foresters or equivalent	90 <sup>3</sup>	519,462
Total "State"	90	519,462 M
Other Public		
County and Municipal	3	233
Soil Conservation Districts	6	8,732
Total "Other Public"	9	8,965 M
Industry		
Paper companies	12 <sup>4</sup>	39,240
Sawmill and land companies	3	7,276
Total "Industry"	15	46,516 M
Commercial		
Regular private companies	40	57,000 <sup>5</sup>
Total "Commercial"	40	57,000 M
 NATIONAL TOTAL	 167	 742,273 M

<sup>1</sup> This list was compiled from reports by the operating agencies (as the State Foresters) or from direct correspondence with the nursery. Omissions and corrections should be reported to the Chief, U. S. F. S., Washington, 25, D. C.

<sup>2</sup> The TVA also had an experimental nursery producing no forest tree stock.

<sup>3</sup> Of these 90 nurseries 89 produced stock in 1955, and one was on a "standby" basis. Not included in this summary are 7 which produce only shrubs and plants for wildlife cover plantings. Of these 89 tree producing nurseries 82 were under the C-M 4 cooperative tree distribution program.

<sup>4</sup> In addition to these 12 nurseries, 2 more were being established.

<sup>5</sup> Estimated.

### FOREST-TREE NURSERIES IN THE UNITED STATES IN 1955

(Each nursery's name is indented so as to place its initial letter in the column for its class of ownership)

None.							

### Invitation

All persons who work in reforestation, or who are interested in it or some allied field are invited to send in material for publication in Tree Planters' Notes. If their material is not yet in final form for publication, they are invited to at least send a letter to Tree Planters' Notes and tell what they are doing and what manner of information should be published. Beautifully typed articles of flawless grammar are not required, although such would not be rejected. Manuscripts written in lead pencil during noon hour are acceptable if that is what it takes to get an account of what has been done. The address is: Chief, Forest Service, U. S. Department of Agriculture, Washington 25, D. C.

### Subscriptions and Mailing List

Tree Planters' Notes will be sent upon request to persons and organizations doing reforestation work, and to libraries, forest schools, and similar appropriate places. The address is given above.
